ISDN

- ISDN
- SMS function*
- ETV® Online*
- Public Phonebook Access*

class of its own

Corded ISDN featurephone

The swissvoice Eurit 4000 is an extremely easy-to-use premium ISDN telephone that will increase your telephone efficiency. Its 2000 number phonebook with full-text search can find even a rarely used entry effortlessly. Immediately open a phonebook entry just by entering its initial letters on the alpha-numeric keyboard. Populate your phonebook via ETV® Online* retrieval (search for name and address via the telephone number), or search for addresses and telephone numbers of private subscribers or companies in the public telephone books*. Create new entries directly via the keyboard or synchronize with your PC database (e.g. Microsoft® Outlook®) using the Eurit Office Tool (optional accessory). You'll always be on top of things because the mail box clearly lists all unanswered calls and the LOG register saves date, time, duration of call and the cost of the last calls. Let the swissvoice Eurit 4000 take over some of your daily tasks, e.g. with its time-controlled answering machine. And, you can simply send an SMS* from your swissvoice Eurit 4000 to your cellular phone advising you that new messages have been received. Swissvoice Eurit 4000 – a class of its own!

swissvoice Eurit 4000

Public phonebook access*

Search for addresses and telephone numbers of private subscribers or business organisations or companies
